SRM TRP Engineering College, Tiruchirappalli

Instructions to the Students:

Select a Web Technology research topic of your choice and identify one Q1/Q2/Q3 (Scopus/SCImago indexed) journal research paper as the Base Paper for your study.

Critically analyse the Base Paper with respect to the technologies used, architecture, methodology, performance, security, scalability, and limitations.

Conduct a literature survey of 10 related research papers and compare their technologies, methodologies, frameworks, datasets or evaluation criteria, performance results, and limitations.

Critically identify and justify a research gap based on the Base Paper and the literature survey, focusing on challenges in modern web application development.

Map the identified research problem/gap to a relevant United Nations Sustainable Development Goal (SDG), specifying the goal number and target, with appropriate justification.

Assessment Question:

Guidelines:

1. **Topic Selection:** Choose a focused Web Technology research topic (e.g., web application security, responsive web design, web performance optimization, progressive web applications, cloud-based web applications, web accessibility, or modern web frameworks).
2. **Base Paper:** Select ONE Q1/Q2/Q3 journal paper (Scopus/SCImago indexed, published within the last 3–5 years) as the Base Paper. Attach proof of the journal quartile.
3. **Base Paper Analysis:** Analyse the Base Paper's problem statement, web technologies and frameworks used, system architecture, methodology, performance, security, scalability, results, and limitations.
4. **Literature Survey:** Identify and summarize 10 peer-reviewed research papers related to the selected Web Technology topic. Present the comparison in tabular format covering: Author(s) & Year, Objective, Methodology, Technologies/Frameworks Used, Dataset or Evaluation Criteria, Results/Performance, and Limitations.
5. **Research Gap:** Based on the Base Paper and the literature survey, critically identify ONE specific research gap and justify its significance in addressing existing challenges in web application development, such as performance, security, accessibility, interoperability, scalability, or usability.
6. **SDG Mapping:** Map the identified research problem to the most relevant United Nations Sustainable Development Goal (SDG 1–17) and specify the applicable target number, with a brief justification of the relationship between the research problem and the selected SDG.

SRM TRP Engineering College, Tiruchirappalli

Rubrics for Evaluation:

Criteria	Excellent (6)	Good (5)	Satisfactory (4)	Needs Improvement (3)	Unsatisfactory (2)
1. Understanding of Problem & Concept					
2. Problem-Solving Approach & Logic					
3. Step-by-Step Analysis					
4. Algorithm / Data Structure Application					
5. Accuracy of Final Answer					
6. Presentation & Technical Clarity
